

Parameter	Solid	Fluid
Stiffness tensor \mathbf{D}	$= \mathbf{D}(K, \nu)$	
Bulk modulus K	$2.2 \times 10^{10} \text{ Pa}$	
Poisson ratio ν	0.2	
Biot coefficient α	1	
Thermal expansion β	$8 \times 10^{-6} \text{ m}^3 \text{ m}^{-3} \text{ K}^{-1}$	$2.1 \times 10^{-4} \text{ m}^3 \text{ m}^{-3} \text{ K}^{-1}$
Porosity ϕ	Ω_h : 0.01 Ω_l, Ω_x : 1	
Compressibility c		$1 \times 10^{-10} \text{ Pa}^{-1}$
Permeability \mathcal{K}	Ω_h : $1 \times 10^{-11} \text{ m}^2$ Ω_l, Ω_x : $a^2/12$	
Viscosity μ		$1 \times 10^{-3} \text{ Pa s}^{-1}$
Density ρ	2700 kg m^{-3}	1000 kg m^{-3}
Heat capacity C	790 J K^{-1}	4208 J K^{-1}
Thermal conductivity κ	$3.1 \text{ W m}^{-1} \text{ K}^{-1}$	$0.6 \text{ W m}^{-1} \text{ K}^{-1}$
Friction coefficient F	0.9	
Initial temperature T_0	$0^\circ\text{C} = 273 \text{ K}$	
Initial aperture a_0	$1 \times 10^{-4} \text{ m}$	
Numerical parameter c^*	$1 \times 10^4 \text{ Pa m}^{-1}$	

The effective parameters of Eqs. (1) and (2) of the paper are

$$\begin{aligned}\rho_e C_e &= \phi C_f \rho_f + (1 - \phi) C_s \rho_s, \\ \kappa_e &= \phi \kappa_f + (1 - \phi) \kappa_s.\end{aligned}$$

These reduce to the fluid values in the fractures, where $\phi = 1$. The normal parameters \mathcal{K}_j and κ_j are inherited from the fracture, and divided by a .
